Request for Quotation: compact technical review by an independent ML specialist

MIT project 28436 "Feasibility AI PM+Marketing" · ePROCURE Consulting B.V. (trading as Inclufy), Chamber of Commerce (KvK) 66586356, Almere, the Netherlands · 2 November 2026 · contact: S. Loukile, lead researcher, sami@inclufy.com, +31 6 39456320

With the support of the Province of Flevoland, Inclufy is conducting a feasibility study into agentic AI for project management and marketing in SMEs. Part of this study is an independent technical review of two machine-learning cases. For this review we are looking for an external ML specialist for a compact assignment of **20 hours at a fixed price of no more than €2,500 excluding VAT**. This request is self-contained; the full case description and the model independence declaration are enclosed as annexes. This request is being put to several candidates in identical form. Quotations may be submitted in English or Dutch.

1. The assignment

Assignment	A compact, independent technical review of the two main cases from the enclosed case description: (1) 90-day cash-flow forecasting and (2) next-best-action recommendations, both on the synthetic SME datasets provided, resulting in a concise technical feasibility report.
Scope and price	**20 hours · fixed price, no more than €2,500 excluding VAT** · invoicing in one or two instalments based on a specification of hours, linked to project code MIT-28436 · additional work only after prior written instruction.
Timeline	Intake in the week of 9 November 2026 · **benchmark results by 30 November at the latest (hard deadline)** · concise report by 11 December 2026 at the latest.
Out of scope	No product development, no assessment of Inclufy applications, no in-depth follow-up analyses beyond the two main cases.

2. Division of roles and safeguarding of independence

The value of this review stands or falls with the independence of its outcome. All judgement-forming work therefore rests exclusively with the specialist, and the client's role is limited to facilitation:

Exclusively with the specialist	With the client (lead researcher)
All measurements and benchmark runs; all model choices and hyperparameters; the analysis of the results; the feasibility statement per domain and all conclusions of the report. Unfavourable outcomes are reported in full as well.	Supplying datasets and data descriptions; depositing the sealed reference set for case 2 in advance; supplying pre-programmed baseline scripts solely for verification by the specialist; organising the intake, interim meeting and delivery meeting; project administration.

The client does **not** run any measurements before or alongside the specialist, makes no model choices, does not alter the deposited reference set after it has been deposited, and does not edit the specialist's conclusions in any way. Inclufy's parallel in-house product development remains entirely outside this review; at most it features as a demonstration during concept validation, as laid down in the internal note on parallel in-house development (available on request). On award of the assignment, the specialist signs the enclosed independence declaration (separation of roles, separate hours and files).

3. Intake decision points (to be fixed in advance)

At the intake, before any measurement takes place, the following are recorded in writing:

1. **Target variable and aggregation level for case 1** (for example income and expenditure per month, or the 13-week total), including the agreement that in addition to MAPE, WAPE or MASE and the improvement over the baseline are reported;
2. **Decision rule per metric**: when the threshold (MAPE < 20%; precision@5 ≥ 70%) counts as met (mean, median per company, or confidence bound);
3. **Reference procedure for case 2**: the reference set is deposited with the project administration before the measurement and opened only after it; the applicable target and the size of the reference set are recorded;
4. **Status of the synthetic data**: conclusions are formulated conditionally; the generation script is shared only after the measurement.

4. Depth of execution within 20 hours

Component	Hours	Content
Intake and short research plan	2	Record the decision points from section 3; plan of no more than 2 pages.
Data and baselines	5	Data assessment for both cases; baselines for case 1 (naive and seasonal naive) and case 2 (popularity and random), including verification of the supplied baseline scripts.
Execution	7	Case 1: one transfer-learning approach at the agreed aggregation level, at least three runs, full history plus one reduced variant (12 months) as a limited learning curve. Case 2: top-5 ranking, precision@5 against the deposited reference and held-out months.
Benchmark and analysis	4	Measurement in accordance with the decision rules; spread per company, random baseline and a reliability indication reported.
Reporting	2	Concise feasibility report (approximately 8 to 10 pages): feasibility statement per domain, preconditions, limitations; one meeting with the lead researcher.

Deliverables: (1) short technical research plan with the recorded decision points; (2) reproducible research PoC with benchmark results; (3) concise technical feasibility report.

5. Requirements and assessment

- Own registration with the Dutch Chamber of Commerce (KvK) or an equivalent EU business registration; signing of the enclosed independence declaration on award of the assignment.
- Cooperation with the grant accountability towards the Province of Flevoland (specifications of hours, supporting documents, possible audits) forms part of the assignment; publications carry the acknowledgement "made possible in part by a grant from the Province of Flevoland".
- The quotation contains: name and CV of the specialist carrying out the work, a concise approach within the 20 hours, fixed price, availability, Chamber of Commerce number.
- Assessment: quality and realism of the approach within 20 hours (40%), demonstrable experience with time-series and recommendation models on limited data (25%), price (20%), availability within the timeline (15%).

6. Submission

Please submit your quotation **by Friday 6 November 2026, 5:00 PM (CET)** to sami@inclufy.com. Intended award: Monday 9 November 2026. Questions about this request are answered by email and shared with all candidates in identical form. Annexes: (1) case and assignment description with the outline measurement protocol; (2) model independence declaration. The datasets are provided after award.

Made possible in part by a grant from the Province of Flevoland.
