Intake decision record — compact technical review

MIT project 28436 · ePROCURE Consulting B.V. (trading as Inclufy) and AI & Partners B.V. · based on the revised quotation of 3 November 2026 (20 hours, fixed price €2,500 excl. VAT) · all points below are fixed **before any measurement** and confirmed in writing by both parties

Date and time of intake		**Present**	S. Loukile (lead researcher) · M. Borrelli · V. Ademi

1. Case 1: target variable, aggregation level and metrics

> **Data observation (supplied dataset):** weekly net cash flow is negative in 776 of 1,560 company-weeks and within ±€500 of zero in 419. MAPE on net cash flow is therefore not meaningful (division by values near zero). Proposal: forecast income and expenditure separately, and report net cash flow and cash position derived from those.

Target variable: ☐ income and expenditure separately (proposed) ☐ cash position at week 13 ☐ other: _____

Aggregation level: ☐ per week, 13-week horizon ☐ per month, 3 months ☐ 13-week total

Metrics: MAPE (threshold < 20%) plus ☐ WAPE ☐ MASE and improvement over ☐ naive ☐ seasonal naive (52 weeks)

Split: forecast the last 13 weeks per company from preceding history; rolling start points: _____ · runs per model: _____ · reduced-history variant: 12 months.

2. Decision rule per metric

Metric	**The threshold counts as met when…**
Case 1: MAPE < 20%	☐ mean over the 12 companies ☐ median per company ☐ at least ___ of 12 companies ☐ upper bound of confidence interval
Case 2: precision@5 ≥ 70%	☐ mean over the 15 companies ☐ lower bound of bootstrap CI ☐ at least ___ of 15 companies · random baseline reported (≈18%, 5 of 28)

Verdict per domain: ☐ "feasible" / "not feasible" / "not demonstrated within this setup" (as proposed in section 4 of the quotation)

3. Reference procedure case 2

The reference set (top-5 kanaal×segment per company, 15 companies) is deposited with the project administration **before** the specialist sees any results and opened only after the measurement. Its integrity is fixed by the SHA-256 fingerprint below; any later change to the file would change the fingerprint.

File	case2 reference set (120 rows: 15 companies × top 8, of which the top 5 count)
SHA-256	`76b94c0a2ecd060a1569394ae2bb2f192bb1487c44d5bf6906767aba95ecffce`
Deposited on (date, time)	
Target that counts	☐ top 5 by affinity, all campaign goals ☐ per goal: _____
Held-out months	months ___ to 24 (of 24)

4. Status of the synthetic data

☐ Conclusions are formulated conditionally (valid for data with this structure and volume)

☐ The generation script is shared only after the measurement

☐ Preprocessing by Inclufy is reviewed, accepted and documented by the specialist

5. Planning, priority and practicalities

Datasets delivered	on: _____ (agreed: by 10 November)
Research plan (max. 2 pages)	by: _____
Working PoC	by 24 November
Benchmark results (hard)	by 30 November
Concise report	by 11 December
Priority if hours run short	Case 1 first (as proposed by AI & Partners)
Interim check-in	date: _____
Invoicing	per phase, hour specification, project code MIT-28436
Independence	Hours and files of the specialist kept separate from Inclufy's; the lead researcher runs no measurements, makes no model choices and does not edit the conclusions. Other tracks (governance review, sounding board) are not part of this assignment.

6. Other agreements

Confirmation: this record is sent by email after the intake and confirmed by reply by both parties; it is then filed in the project file of MIT-28436.

Made possible in part by a grant from the Province of Flevoland.
